Art Unit: 1644

Claims 1-39 are pending. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 28 and 30, drawn to a method for diagnosing sepsis, classified in class 435, subclass 7.24 and 7.4.
- II. Claims 28 and 31, drawn to a method for diagnosing an autoimmune disease, classified in class 435, subclass 7.24.
- III. Claims 28 and 32, drawn to a method for diagnosing cardiovascular disease, classified in class 435, subclass 7.24.
- IV. Claims 28 and 33, drawn to a method for distinguishing bacterial and viral infections, classified in class 435, subclass 7.24.
- V. Claims 28 and 34-39, drawn to kits, classified in class 435, subclass 7.1+.

The inventions are distinct, each from the other because of the following reasons:

Claims 1-27 and 29 link(s) inventions I through IV. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claim(s), claims 1-27 and 29. Upon the indication of allowability of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise requiring all the limitations of the allowable linking claim(s) will be rejoined and fully examined for patentability in accordance with 37 CFR 1.104. Claims that require all the limitations of an allowable linking claim will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are

Art Unit: 1644

governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

Applicant(s) are advised that if any claim(s) including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. In re Ziegler, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Inventions V and I-IV (as well as their linking claims 1-27 and 29) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the product can be used in a different process. Specifically, the components provided in the kit could be used to assay for a cellular analyte and for a soluble analyte in separate assays, rather than in one assay conducted as in the method of Groups I-IV (as well as their linking claims 1-27 and 29).

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1644

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
